

Quickly Process and Decision Vehicle Loans with Dealertrack

The Dealertrack connector provides seamless integration between the Temenos Loan Origination module and dealerships on the Dealertrack credit application network.

Key Features

Seamless Integration

Applications created through Dealertrack, including dealer comments, are automatically transferred to the platform where a defined workflow begins. Upon completion of the workflow, the loan pricing and decision are communicated back to Dealertrack to be reviewed by the dealer.

Automatic Decisions

Take advantage of the Loan Origination module's flexible configuration settings and robust business rules engine to decision and price loans in a timely manner with no manual interaction.

Process, Track and Update

The Dealertrack connector creates a single interface where vehicle loan applications can be processed, tracked and updated. All changes made within the system are sent directly back to Dealertrack so dealerships can monitor the loan application status.

Benefits

Increase Revenue Opportunities

The Dealertrack connector allows financial institutions to take advantage of the indirect lending channel to reach a large audience of dealerships to attract new loans!

Save Time

Eliminate time spent manually approving loans by creating simple, easy to use business rules that automate loan pricing and decisions.

Reduce Redundant Data Entry

Fields in the Loan Origination module are automatically populated based on information found on the Dealertrack application, eliminating the need for double data entry!

More Information

System Requirements

Version 10.12 or higher is required in order to utilize the Dealertrack connector.

Provider Highlight

dealertrack technologies

Dealertrack is the leading end-to-end technology solution provider in the automotive retail industry. In addition to being the nation's largest online credit application network, Dealertrack offers lenders and dealers comprehensive Inventory, Sales, F & I and Compliance solutions, as well as electronic motor vehicle registration and titling applications, paper title storage, and digital document services.
