

IMM eSign Remote Connector

Integrated to Loan Origination and Account Origination Modules

Streamline the eSignature Experience

IMM eSign Remote makes electronic signature (eSignature) easier with direct integration to the Temenos Account and Loan Origination modules for loans and accounts through the IMM eSign connector.

Key Features

Certified eSignature Connector

Send and receive documents electronically using IMM eSign Remote. IMM eSign Remote is a cloud-based solution which allows signers to safely review and sign documents from any location as long as there is an internet connection. The signed results are returned to the system through the certified connector to complete the automated loan and/or account origination process.

Streamlined Verification Process

The IMM eSign remote connector offers authentication options which enable financial institutions to easily verify the signer and validate the document integrity each time it is accessed going forward. Each option provides a greater level of assurance so the financial institution can match the option most appropriate to the transaction. IMM eSign Remote offers authentication options including email verification, share secret password authentication, and knowledge-based authentication (KBA) questions.

Ensured Compliance

Using the IMM eSign Remote connector can help financial institutions meet compliance requirements by controlling the signing process and ensuring all information remains secure. IMM eSign Remote is fully compliant with UETA and ESIGN acts as well as fully legally enforceable.

Benefits

Reduce Cost Through Efficiency Gains

Reduce costs per transaction by decreasing paper generation and operating costs. IMM eSign Remote helps to execute account and loan documents faster, enabling account holders to open new accounts and start loans within minutes.

Increased Efficiency

Use a single system to manage all online documents and signatures, as well as present pre-populated PDF documents with eSignature capabilities to account holders.

Increase Staff Productivity

The IMM eSign Remote connector eliminates the time-consuming tasks associated with paper documents. Staff can send documents for signature to account and loan applicants instantly and set up automated reminders to progress the process. There is also no need to re-key data because IMM eSign Remote can automatically update information from the system.

More Information

System Requirements

Module(s) version 10.31.15 or higher is required to utilize the IMM eSign Remote connector.

Provider Highlight

IMM develops and delivers innovative technology solutions that enable financial institutions to electronically streamline their business operations and processing environments. With a strong and secure legacy of serving more than 600 financial institutions with solutions for document presentment; business process automation; and for web, tablet and pad-based electronic signature collection.
