

**TEMENOS**  
THE BANKING SOFTWARE COMPANY

# **Temenos Technology** Workbench

**Accelerate Temenos  
products changes  
via configuration  
and DevOps  
ensuring greater  
speed to market**

## Key Stats

Banks with strong DevOps capabilities<sup>1</sup> have<sup>2</sup>:

**20%**  
lower customer attrition

**17%**  
better Net Promoter Score

<sup>1</sup> Adoption of DevOps to enable the introduction of new software faster and more predictably, using continuous testing, integration and deployment techniques

<sup>2</sup> Difference between best performers and average

Source: Temenos Value Benchmark Insight

Typically, the process of adapting a business system's functionality to evolving user needs — "changing the bank" — is unproductive, inefficient and risky. It is unproductive because the bank's developers do not have a single place where changes can be designed intuitively and automatically packaged into files that can be versioned and tracked. Forced into the system's intricacies to perform coding and menial tasks, the developers cannot focus on producing high-quality changes frequently and rapidly.

Moreover, faulty changes made directly in the mass of live system code can disrupt business-critical operations. Such changes are not easily identifiable and fixable, which discourages accountability and quality. Finally, banks are not able to adapt functionality to rapidly changing requirements.

Temenos Workbench enables banks to adapt their core banking functionality in a much more productive, efficient and risk-free manner. It does so by providing intuitive graphical tools for configuring all types of changes, by working with files that can be tracked and versioned, and by supporting automation and best-practices in DevOps.

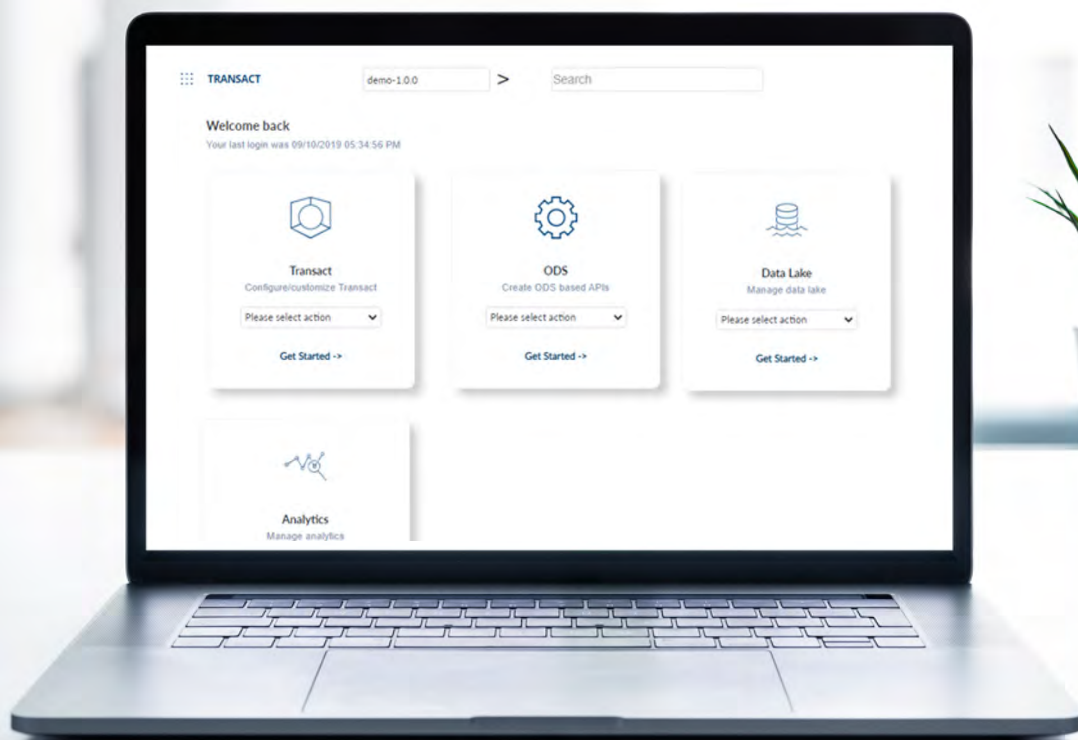

Temenos Workbench boosts responsiveness to changes in business requirements while reducing cost-per-change.

# Problems Solved

Temenos Workbench supports the Software Development Lifecycle (SDLC) and DevOps capabilities, providing a single entry tool to configure Temenos Transact modules with easy-to-use, intuitive and consistent tooling. It provides an embedded packaging facility to promote changes from your development environment all the way up to production.

Simplify configuration and customization of Temenos software without the need for complex technical expertise in order to boost productivity for development teams and reduce time to market. Temenos Workbench has been designed for all user types, with guided web-based tooling to adapt software in a matter of a few clicks, without the need for advanced technical expertise. The Temenos Transact data model can be extended simply by adding a new field, and then exposing the new field in an updated API in just 2 minutes — including the packaging of the changes.

Web-based, single entry point for configuration, for end-to-end change management

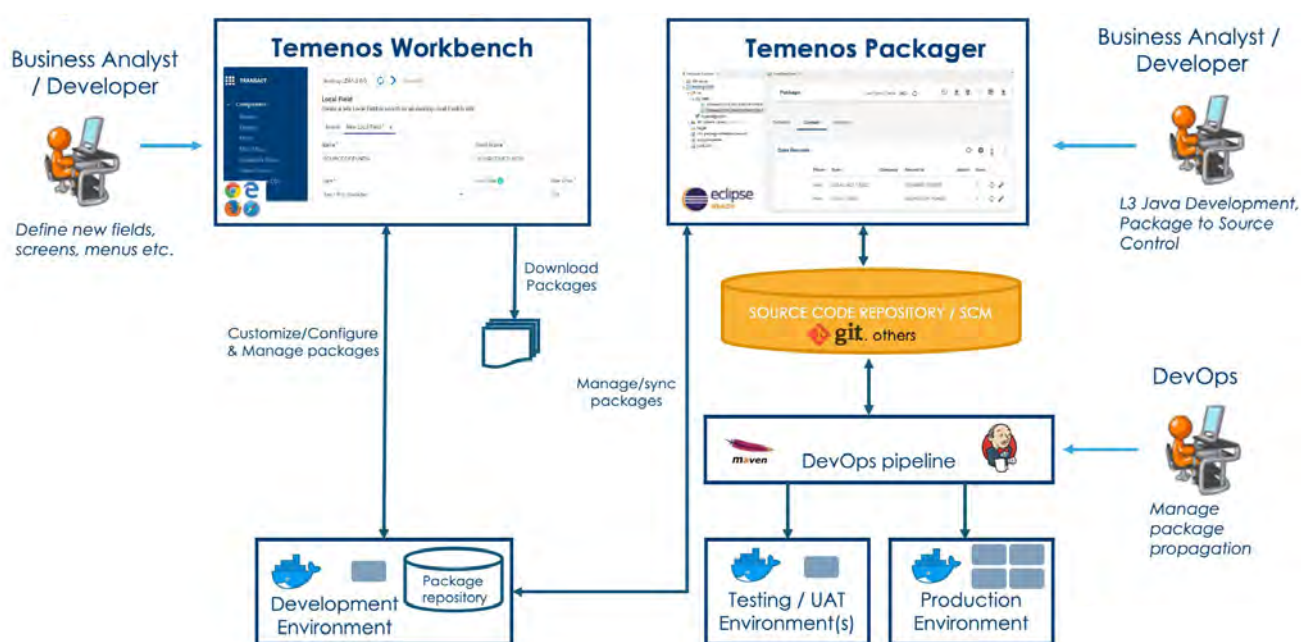

## SDLC with Packages:

All configurations can be performed on the web, in the cloud, reducing your implementation costs, and making easy it to find resources to implement your business features, while still ensuring a high standard of quality in all your changes.

## Temenos SDLC packages detailed:

## Key Features

**Single tool** to configure Temenos Transact and APIs with consistent user experience

**Advanced and simple packaging solution** to package and promote your changes, enables scripted deployments and will work with any industry standard DevOps solution including Temenos Continuous Deployment

**Intuitive wizards** to cover common end-to-end configuration use cases to accelerate changes

**Manage configuration as "code"** by applying the same advanced software development LifeCycle methodologies used in programming to configuration — review changes, history of changes, merge changes, DevOps — to boost quality and productivity

## Key Benefits

- ✓ **Web-based, single entry point for configuration**, for end-to-end change management deployed to your choice of cloud or on-premise.
- ✓ **Accelerate development with agile teams to implement changes**
- ✓ **Boost developer productivity**
- ✓ **Get changes to market faster**
- ✓ **Automated deployments** provide a repeatable process without manual actions, to deploy changes boosting the time to market without human error, in the critical process of deployments
- ✓ **Future proof solution** that will support all Temenos products with the same methodology to configure and package

# More Information

Temenos Workbench delivers the tooling you need for rapid innovation.

## About Temenos

Temenos AG (SIX: TEMN) is the world's leader in banking software. Over 3,000 banks across the globe, including 41 of the top 50 banks, rely on Temenos to process both the daily transactions and client interactions of more than 500 million banking customers. Temenos offers cloud-native, cloud-agnostic and AI-driven front office, core banking, payments and fund administration software enabling banks to deliver frictionless, omnichannel customer experiences and gain operational excellence.

Temenos software is proven to enable its top-performing clients to achieve cost-income ratios of 26.8% half the industry average and returns on equity of 29%, three times the industry average. These clients also invest 51% of their IT budget on growth and innovation versus maintenance, which is double the industry average, proving the banks' IT investment is adding tangible value to their business.
