

Apiax Platform

Master complex regulations digitally

Discover more at apiax.com

A powerful toolkit that allows experts to manage the complete lifecycle of regulations purely digitally.

Apiax' award-winning platform is a single-pane workbench for legal, compliance, risk and tax experts.

Our lean yet comprehensive solution allows experts to regain control over evermore complex regulatory requirements affecting their organizations' strategies, processes and tools.

Kickstart with Regulatory-as-a-Service

Our ready-to-use digital regulatory rulesets provide binary answers to complex regulatory questions for more than 100 jurisdictions and are continuously verified and kept up to date with the latest regulatory changes by our best-in-class content partners.

Leverage your existing legal expertise

Digitalize and enrich your existing in-house legal expertise with pre-structured rulesets and provide digital rules to your internal stakeholders.

Access and understand rules

Our unique visualization of complex rules with their underlying taxonomy and legal rationales makes it easy for every stakeholder to understand them.

Manage and customize rules

Customize rules with an easy-to-use rule editor to apply your organization's risk appetite to every level, from market segmentation to a specific process. Manage rules with versions — test and simulate various scenarios.

Deploy and execute digital rules

Distribute machine-readable and executable rules across organizations at a click of a button and instantly transform them into actionable intelligence within applications and processes.

End-to-end traceability and auditability

Every change to the rules is tracked and documented with legal rationales, ensuring full traceability of decisions. Monitoring of rule execution ensures end-to-end auditability, satisfying auditors and regulators. Monitoring rule usage enables cost allocation per business unit.

«Just like Google automated search and Expedia mechanized travel booking, Apiax is computerizing compliance.» Julius Baer

Temenos Adaptor

SECURITY

Industry Standard Encryption
2-Factor Authentication
Continuous Authentication

OPERATIONS

Cloud (AWS)
Private Cloud (Swisscom)
On-Premise

SUPPORT

API Documentation & SDKs
Community Support
Enterprise Support

Standardized legal taxonomy

Our underlying legal taxonomy, based on FIBO (Financial Industry Business Ontology) and enhanced with regulatory concepts, provides a strong legal foundation. It harmonizes and unifies the interpretation and execution of multi-jurisdictional regulations.

Distributed collaboration on rules

The platform empowers distributed teams, internal and external, to collaborate seamlessly on the same rules and in the same context as custom roles and access rights.

Unified regulatory rules

A unified regulatory rule repository and a sophisticated cockpit ensure regulatory certainty across the whole organization and full transparency over rules in action. This allows organizations to respond quickly to changes and reduces compliance and business risks.

Increase process efficiency

Machine-readable rules empower the next generation of digital innovation towards a high level of automation and straight-through processing.

High performance and always available

Apiax is built for business-critical applications, guaranteeing high performance and availability — anytime, anywhere.

Modular integration options

Apiax offers easy and flexible integration with an innovative use-case-centric API based on proven REST technology, or by ready-to-use adaptors and a DMN export for third party rule engines.
