

## Access Mortgage Data Using the FICS® Connector

Integrated to the Collection and Recovery Module

Access an account holder's mortgage data directly within Temenos Infinity with the addition of the FICS® connector.

### KEY FEATURES

#### Access Additional Mortgage Data

The FICS® connector provides additional data to the system including the Loan Status, Number of Payments, Principal Balance and more! The fields imported from the FICS® connector can be used for searching, creating queues, reports and screens directly within the platform.

#### Quickly Identify Delinquent Accounts

Easily identify delinquent mortgage accounts with the FICS® connector. FICS® will only import accounts into the system with a balance greater than \$0.00 and a days delinquent value greater than zero. Through simple queue criteria set-up, these accounts will automatically flow into a predefined queue.

#### Create Payment History Records

During the daily batch import, the Date of Last Payment and Amount of Last Payment fields will be compared to the payment history records within the system. If there is not an existing payment with the same date and amount, a payment is automatically created in the modules using these values. Users can view the records of these payments within the Payment History screen.

### BENEFITS

#### Quick and Easy Activation

Once a relationship with FICS® is established, activating the FICS® connector in the system takes only minutes!

#### Eliminate the Need for Multiple Programs

Eliminate time spent maneuvering between multiple browsers and programs. All tools needed to access mortgage data from FICS® can be done directly in the platform.

#### Reduce Redundant Data Entry

Fields will automatically be imported into the system preventing duplicate data entry, and saving users time allowing them to focus on other tasks.

### MORE INFORMATION

#### System Requirements

Version 9.02 or higher must be running in order to use this connector.

#### Provider Highlight

FICS® specializes in providing flexible, comprehensive residential and commercial technology solutions to the mortgage industry. Over three decades of continuous research and development has advanced
