

TEMENOS
Risk and Compliance

SOCIAL MEDIA COMPLIANCE

The FFIEC states in their guidance that all financial institutions, regardless of size, should have policies and procedures providing oversight and controls comparable to their involvement in social media. Temenos' Social Media Compliance is the financial industry's premier compliance ready, social media management solution. What is said on social media can impact an organization's risk profile due to poor due diligence or oversight. By using Social Media Compliance, you are empowered to manage and mitigate this risk.

| Managing

To effectively manage social media, you need a solution that reflects the social media operations within your organization. Our tool provides access levels and workflows for marketers, publishers, content creators, approvers and executives. Whether your social media contributors are 3 or 300, Temenos Social Media Compliance helps you address the collaboration needs effectively.

| Monitoring

On social media, listening is more important than being part of the conversation. Social Media Compliance makes monitoring understandable and relevant to your

financial institution by helping you narrow your ear to the important elements. Internal and external monitoring allows your financial institution to see what employees are saying, as well as what is being said about your organization on the web.

| Archiving

Logging activity for your organization's social activity means keeping track of the individuals who view, post and reply to messages as well as providing the details for what those messages say about you. Social Media Compliance makes this process simple and is an important step to meeting regulation requirements.

Satisfy regulatory requirements
