CYGNETISE

A better way to manage your authorised signatories

Authorised signatory management is usually a **manual**, **paper-based** and **costly** process.
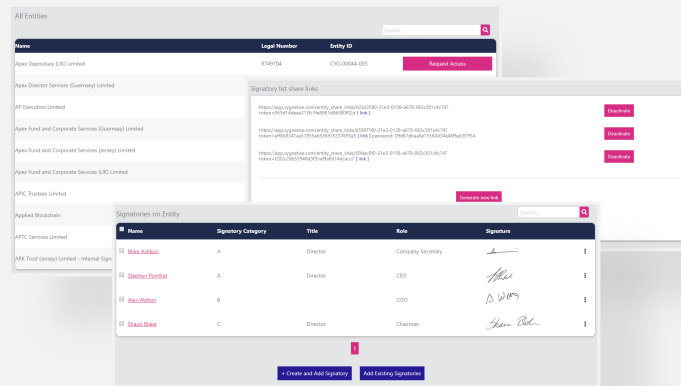

Cygnetise is a blockchain application that solves the pain of signatory management by making it **more efficient**, **transparent** and **secure**.

With Cygnetise's signatory management application you can:

- Simplify and optimise the way you manage authorised signatory lists

- Cut costs and save over 90% of time spent on manual admin tasks

- Increase the security and transparency of signatories data storage and distribution

- Reduce the risk of fraud for your organisation

Key features:

- Instant data changes across multiple lists

- Real-time list sharing

- Additional User Data / KYC (Passports etc.)

- Custom field selection

- Stand-alone or integrated deployment

Why Cygnetise?

Tamper proof & validated against the blockchain

Instant data management & distribution

Trusted, immutable audit trail

Multiple distribution methods

"
Cygnetise makes the process clear and simple, reducing our internal burden.
