THE HID® IDENTITY VERIFICATION SERVICE IS AN OFF-THE-SHELF, END-TO-END SOLUTION FOR DIGITAL ONBOARDING AND KYC COMPLIANCE

The HID Identity Verification Service runs a suite of advanced technical checks against every customer submission to ensure that identities are thoroughly authenticated and verified. Your business is protected from fraudulent identities that have been tampered with or forged, as you offer customers a more user-friendly onboarding experience.

Across the globe anti-money laundering directives are becoming more stringent, requiring regulated firms to verify the identities of their clients prior to engaging in any commercial activities. This verification process is referred to as Know Your Customer (KYC) and Anti Money Laundering (AML). Whilst KYC/AML is necessary to prevent against fraudulent and other illegal activities, it is often a source of inconvenience and frustration for both the business and the customer.

The challenge is that most onboarding processes deployed in the past are manual and cumbersome for firms and their customers causing minimal compliance practices, significant cost increases when acquiring new customers and customer drop off—all of which result in lost business. In addition, since the large shift toward a more connected world, customers are starting to demand a fully digital identification process that enhances the entire user experience.

With the HID Identity Verification Service, you will become KYC compliant just by asking your customers to go through a few simple steps on a highly secure, user-friendly mobile application—either remote or in person.

HID Identity Verification Service can be integrated with HID Authentication Platform and HID Risk Management Solution to deliver to the customer a secure and consistent, end-to-end digital identity lifecycle user experience.
