The digital world **is evolving.**

The upheavals of the pandemic have accelerated the adoption of digital services and payments wider and faster, in a shorter space of time, than ever before. Added to this, the average consumer is constantly becoming more digitally savvy and alert to the dangers of engaging online.

Authentication must **evolve too.**

This has resulted in an accelerated need for better authentication of customers and their transactions. The need to balance security with user experience remains crucial for successful digital service offerings, since a bad user experience will result in customer abandonment of transaction, or worse.

Just choose **Entersekt**, and you're in.

Entersekt is how the financial world can finally enjoy transactions that are both secure and frictionless. Our customers benefit from a suite of cross-channel, context-aware solutions that enable the most optimal, secure, and best user experiences for every user and every transaction. Here's how we're different:

We offer world-class customer and payment authentication solutions that remove fraud and friction across:

- **Digital channels**, including online banking, mobile banking, call centers, and chat banking.
- **Payment channels**, including e-commerce payments using 3D Secure, faster payments, and QR payments.
- **Data channels**, such as open banking access and consent.

Our solutions are underpinned by strong device identity technology that ensures:

- Limited device drift and no device collision.
- Customers do not constantly need to log in, even after long intervals.
- Passwordless and frictionless access and/or transactions.

Because of this, our clients and their customers experience:

- Enhanced user experiences without friction.
- More robust security, protecting sensitive access and transactions.
- Regulatory compliance.
