

# Building a Sustainable Future: WaveBL's Eco-Friendly Blockchain-Based Solution

WaveBL is the leading provider of an electronic eBL solution that ensures minimal impact on the environment and maximizes efficiency through our unique approach to blockchain mining.

With a strong commitment to reducing carbon footprint, we are proud to offer a state-of-the-art sustainable eBL solution.

## Effortless Mining with Permissioned Miners

Our permissioned mining blockchain infrastructure operates with a permissioned miner consensus mechanism, eliminating the need for extensive computational resources. This approach makes mining tasks effortless and significantly reduces system overload. By closely collaborating with a select group of dedicated miners, we ensure seamless operation while minimizing energy consumption.

## Security and Privacy

The minimalistic approach ensures that logic is not stored within the blockchain, which adds an extra layer of security to the system.

Our blockchain-based platform is designed to be anonymous, safeguarding the identities of parties involved in the interaction. We understand the importance of confidentiality and strive to protect the privacy of our users.

## Mining Not for Profit

Unlike many other blockchain platforms, our blockchain doesn't have any "coin" value. Our focus is on maintaining the integrity of the blockchain and providing an efficient and sustainable solution for our users.

Our streamlined mining process generates over **95% less carbon emissions** than traditional public blockchains.

### About WaveBL

WaveBL is a digital platform that utilizes proprietary blockchain technology to facilitate instant, encrypted, and authenticated transfer of unique trade documents. The platform is designed to meet the needs of all parties involved in trade and has established strong alliances with leading companies in global trade to accelerate digitalization and adoption. WaveBL adheres to universal processes and regulations in use.
