

Temenos Copilot for Workbench

Revolutionize change management, extend and configure Temenos Core — powered by AI.

For 2026, Temenos Workbench introduces advanced Copilot and agentic AI capabilities to support business and technical users across the SDLC—powered by AI, governed by your experts.

Why Temenos Copilot for Workbench?

A unified tool for rapid, easy, and controlled Temenos Core configuration and development.

Copilot for Workbench enables business and technical users to ask questions in natural language, gain insights, and create code extensions.

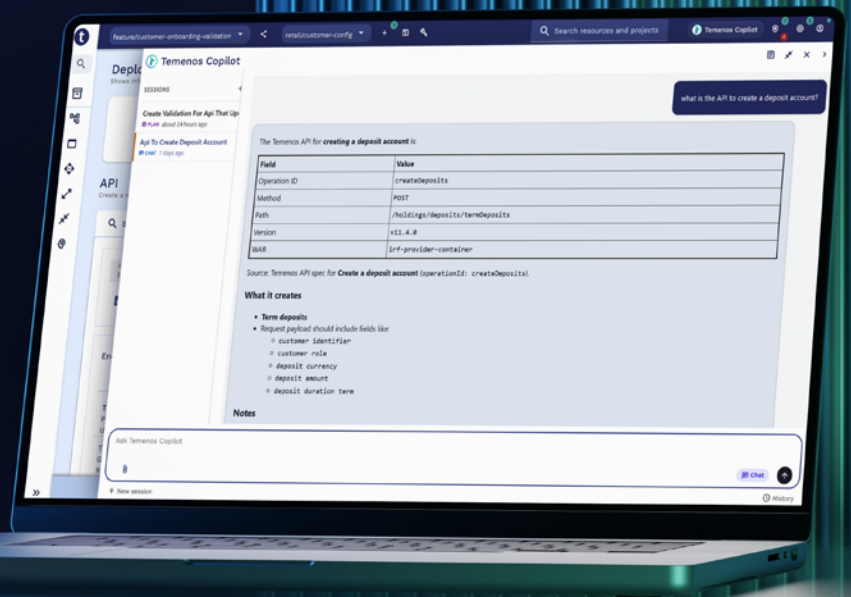

Workbench AI Agent helps plan and execute those extensions, delivering fast, controlled, and accessible AI for effective change management.

Use natural language to describe requirements in business terms.

Enable business users and developers to manage change with limited technical expertise and deliver superior customer experiences.

Deploy configuration and execute automated tests in an AI-assisted Path-to-Live from Development to Production.

Extend and configure Temenos Core and promote changes across environments through a unified, natural language driven Workbench.

Key capabilities

Human-Led, AI-Assisted: Your experts review and approve every change. AI accelerates the work — your people own the decisions.

Natural language interface for AI guidance and high levels of automation to promote changes through Packager.

AI that understands Temenos Core, directly towards your data model, your APIs, the Extensibility Framework.

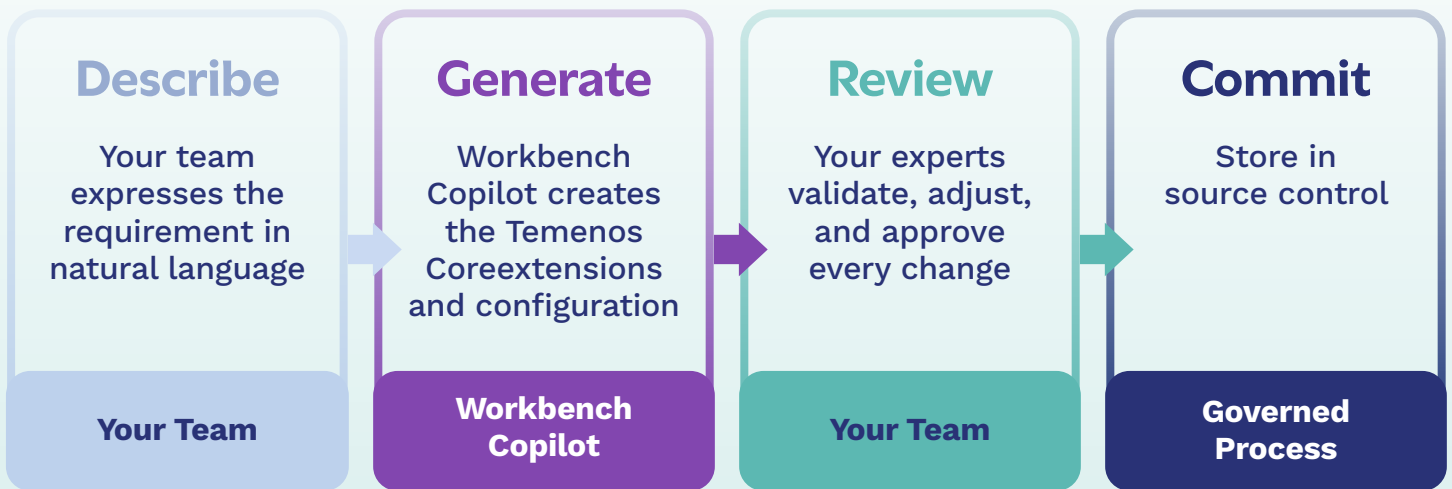

Site Reliability Engineering (SRE) for additional safeguards on package promotion process.

Standardized, methodic process for delivering extensions and configurations to production environments.

SDLC/packaging supports all workbench design modules.

Temenos Workbench and Packager

Temenos Workbench and Packager are available on the Temenos Banking Platform, across a wide variety of Temenos products.
